

VHF MARINE TRANSCEIVER

# IC-M33

# It really floats!

**BUOYANT**

**Waterproof**

1m depth for 30 minutes

Introducing the world's first\*<sup>1</sup> 5W VHF marine transceiver that floats! If you drop the IC-M33 into water, the radio comes up to the surface so that you can easily retrieve it from out of the water. As the radio has a rugged waterproof body\*<sup>2</sup>, it will keep on working even after it has been submerged. Reliable marine communications that won't let you down in or out of your boat!

When actually floating, the base of the radio is level with the water surface.

\*<sup>1</sup> First as a 5W VHF marine handheld transceiver as researched by Icom as of October 2006.

\*<sup>2</sup> 1m depth for 30 minutes, equivalent to IPX7. The IC-M33 is not designed to be used under the water.
