

INSTALLATION OF D-STAR GATEWAY VERSION 3 (“G3”) SOFTWARE

To assist with the installation you are advised to follow the script located at:

<http://dstar.info/G2toG3UpgradeInstructions.pdf>

The UK installation of the RS-RP3C software is supplied on a CD and as such the requirement on page 12 of the update document G2toG3UpgradeInstructions.pdf is different for the UK.

Copy :

dstar_gw_gpg-1.1-1.moarch.rmp

dstar_gw-3.00-6.el7.x86_64.rmp

to the temp directory.

PLEASE NOTE:

1. These files may be a later revision.
2. The CD should be automatically mounted when placed in the drive.
3. The RS-RP3C software supports both Terminal and Access Point connections. These connections require an additional Terminal to be added to the User's registration. Icom UK have been routinely adding an "A" terminal to new registrations for this purpose for several months.
4. It is recommended you study section 2 of the RS-RP3C pdf on the CD. This will explain the changes to creating and maintaining a User and includes changes required to enable the use of Terminal and Access Point modes on the newer radios.
